SCIENTIFIC DUST COLLECTORS ANNOUNCES THEIR NEW Low Profile Bin Vent Dust Collector

ALSIP, ILLINOIS – Scientific Dust Collectors has just announced the introduction of its new compact and heavy-duty, reverse-pulse bin vent dust collector that has no moving parts and ships completely assembled for quick installation. The heavy duty bin vent is only 36” high. High efficiency pleated bags using a patented cleaning system provide long bag life and low maintenance cost. Standard features include: solid state timer pre-wired in NEMA 4 enclosure; compressed air manifold mounted with pipe couplings on both ends for easy connection; magnehelic gauge (monitors differential pressure) with dust trap and connecting hardware; rain hood; and lifting lugs. Other features available: stainless steel construction; fan mounted on bin vent; and photohelic gauge. Special designs available on request. Designed for storage tanks, silos, work bins, and material receivers.
