

## Scientific Dust Collectors Announces

### A Baghouse Dust Collector Retrofit

ALSIP, ILLINOIS – Scientific Dust Collectors has just announced a new retrofit system designed to improve the cleaning systems in all existing baghouse dust collectors. This cleaning system improvement can be applied to all reverse pulse jet baghouses for all baghouses brands. If the blowpipes can be removed, then the Scientific Dust Collector supersonic nozzles can replace the old cleaning systems.

The benefits of this retrofit include the ability to eliminate the flow restricting venturi at the top of the filter bag, lower system operating pressure by reducing pressure drop as much as 2" WG, and superior bag cleaning by inducing more than three times the amount of cleaning air into the filter media than other generic baghouse designs. This superior cleaning of the entire filter provides a longer filter life.
